

BM Security Identity Manager v6.0.0 Fix Pack 4

Uninstalling and Manually Removing Components

When uninstalling the IBM Identity Security Manager (ISIM) there are some components that are not removed from the user's system. Optional components that were installed with the fix pack installer that the user must manually remove include the following:

- A new WebSphere Composite Unit (CU)
- A new WebSphere Business Level Application (BLA)
- A new WebSphere Enterprise Business Asset (EBA)

The above optionally installed WebSphere components are part of the new IBM Identity Security Manager's (ISIM) Identity Service Center. To remove these perform the following procedures in the following order:

- Uninstall ISIM following the uninstallation instructions in the InfoCenter for ISIM.
- Remove all additional components. Follow the "Manual removal of components" section in the Installation Guide on the IBM Security Identity Manager product documentation site.
- To manually remove the WebSphere Composite Unit, the WebSphere Business Level Application, and the WebSphere Enterprise Business Asset, follow the instructions in the new sections.

Manually removing the IBM Security Identity Manager Identity Service Center Composite Unit (CU)

To remove the Identity Service Center's WebSphere Business Level Application and then Enterprise Business Asset, you must first remove it's WebSphere Composite Unit.

Before you begin

Ensure that you are logged on to the WebSphere administrative console.

Procedure

1. To uninstall the IBM Security Identity Manager Identity Service Center CU in a single-server or a cluster configuration, select **Applications -> Application Types -> Business-level Applications**.
2. Select the **IdentityServiceCenterApplication** application.
3. Click **Stop**.
4. Click **Delete**.
5. A window opens to confirm the deletion of the Composition Unit from the business-level application with **WebSphere:cuname=com.ibm.isim_CU.eba**.

6. Click **OK**.
7. Click **Save**.
8. When the Identity Service Center stops, click on the application name.
9. The next panel shows information pertaining to the asset. This will include details about the CU, **com.ibm.isim_CU.eba**.
10. Select the **com.ibm.isim_CU.eba**.

Manually removing the IBM Security Identity Manager Identity Service Center Enterprise Business Asset (EBA)

Before you begin

Ensure that you are logged on to the WebSphere administrative console.

Procedure

1. To uninstall the Identity Service Center EBA in a single- server or a cluster configuration, select **Applications -> Application Types -> Assets**.
2. Select the **com.ibm.isim_6.0.0.v<version>.eba** asset. It will have a description of Identity Service Center.
3. Click **Delete**.
4. A window opens to confirm the deletion of the Asset. Confirm the name **WebSphere:assetname=com.ibm.isim_6.0.0.v<version>.eba**.
5. Click **OK**.
6. Click **Save**.

Manually removing the IBM Security Identity Manager Identity Service Center Business Level Application (BLA)

Before you begin

Ensure that you are logged on to the WebSphere administrative console.

Procedure

1. To uninstall the Identity Service Center BLA in a single- server or a cluster configuration, select **Applications -> Application Types -> Business-level Applications**.
2. Select the **IdentityServiceCenterApplication** application.

3. Click **Delete**.
4. A window opens to confirm the deletion of the Business Level Asset **WebSphere:blaname=IdentityServiceCenterApplication**.
5. Click **OK**.
6. Click **Save**.

Troubleshooting

If you attempt to remove the new Identity Service Center EBA before removing the Composite Unit, the following message will display:

CWWMH0141E: Asset "WebSphere:assetname=com.ibm.isim_6.0.0.v<version>.eba" cannot be removed because the following composition units are based on it: [WebSphere:cuname=com.ibm.isim_CU.eba]. Check log for details.

Unable to remove WebSphere:assetname=com.ibm.isim_6.0.0.v<version>.eba.

User response: Remove the CU first, then remove the EBA.

If you attempt to remove the new ISIM Identity Service Center BLA before removing the EBA, the following message will appear:

CWWMH0149E: Cannot delete business-level application "WebSphere:blaname=IdentityServiceCenterApplication" because it contains composition units. Delete all composition units which belong to the business-level application, and then delete the business-level application. Check log for details.

Unable to remove WebSphere:blaname=IdentityServiceCenterApplication.

User response: Remove the EBA first, then remove the BLA.
