

APAR: IZ01187

Symptom: Provide ability to configure the behavior of Default Date field

Note: A new tag attribute for the optDateInput tag, 'isNeverRequired', has been introduced in formTemplate, to configure the default behavior of 'Default Date' widget. A value "false" assigned to this tag attribute causes the 'Default Date' widget to display the current date value by default. Any value other than "false", will not change the current behavior (default) of the date widget.
