

APAR: IY92227

Symptom: NEW FUNCTION: Add auto-refresh option to completed requests.

Note: Execute the additional steps listed below:

A new property has been introduced in \$ITIM_HOME/data/enroleAuditing.properties for configuring the display refresh rate in the Request Manager Audit trail. Execute the following steps for configuring this property.

1. Open <ITIM_HOME>/data/enroleAuditing.properties file in any text editor.
2. Specify an appropriate auto refresh rate in seconds for the property "enrole.auditing.completed_requests.autoRefreshRate". This property defines the rate of refresh in seconds for the 'Completed Requests' section. If this property is not defined, or has a value '0', auto-refresh will be disabled.
3. Save the file and quit the editor.
